

ENG227 ENGINEERING MATHEMATICS
MIDTERM EXAM

April 4, 2017

Name: _____

Be sure to show your work!

1. Specify the type of the differential equation : $(1 + x^2)dy = (x + xy^2)dx$ and find the general solution. Show your work in detail.

2. Specify the type of the differential equation : $(\sin x)y' + (\cos x)y = \ln x$ and find the general solution. Show your work in detail.

3. Make a suitable change of variable and find the general solution of $\frac{dy}{dx} = \frac{x + y + 1}{x + y - 1}$.

4. Specify the type of the differential equation : $x \frac{dy}{dx} + y = x^2y^2$ and find the general solution. Show your work in detail.

5. Determine whether or not the differential equation : $(e^x \sin y - 2y \sin x) + (e^x \cos y + 2 \cos x)y' = 0$ is exact. Solve it.

6. Specify the type of the differential equation $y' = 1 + (y/x) + (y/x)^2$ and find the general solution. Show your work in detail.

7. Solve initial value problem

$$y' = \frac{yx^5}{2 + x^6}$$
$$y(1) = 1$$

8. Consider the differential equation $(2x + 3) + (2y - 2)y' = 0$. Determine whether this equation is exact or not. If it is, solve it.

9. Consider the differential equation $(ye^{2xy} + x) + axe^{2xy}y' = 0$. Determine for which value of a this equation is exact, and then solve it with this value of a .

10. Consider the differential equation $(ye^{2xy} + x) + axe^{2xy}y' = 0$. Determine for which value of a this equation is exact, and then solve it with this value of a .

11. Consider the differential equation $(2xy - y^3) + (x^2 - 3xy^2)y' = 0$. Determine whether this equation is exact or not. If it is, solve it.

12. Specify the type of the differential equation : $\frac{dy}{dx} + xy = xe^{-x^2}y^{-3}$ and find the general solution. Show your work in detail.

13. Specify the type of the differential equation :

$$y' = y(1 - y)$$
$$y(0) = 1/2$$

and find the general solution. Show your work in detail.

14. Specify the type of the differential equation : $y' + 2y = \cos(3x)$ and find the general solution. Show your work in detail.

15. On what interval we expect unique solutions to

$$y' = \frac{y^2}{1 - x^2}$$
$$y(0) = 0$$

Show your work in detail.

16. Specify the type of the differential equation : $y' = xe^{x^2 - \ln y^2}$ and find the general solution. Show your work in detail.

17. Find the differential equation of all circles of radius 1

18. Show that the function

1. $y = C_1 \sin(\pi x) + C_2 \cos(\pi x)$, where C_1 and C_2 are constants, is a solution of the differential equation:
 $y'' + \pi^2 y = 0$.

2. Solve the initial value problem:

$$y'' + \pi^2 y = 0, \quad y(0) = 1, \quad y'(0) = -1$$
